WordPress Mobile Responsive Custom Web Design

People go online and visit websites to learn more about businesses, brands, products and services and to make business transactions. If you do not have a website, it is not a question of if you need one or not, the only question is how fast we can build it! In today's world having a website is 100% necessary for 99% of all business owners. If you just started a business, a website should have been a part of your original business plan. If you already have a website, it may need some redesigning to improve its performance and to keep up with the times.

WordPress Installation and Configuration

WordPress is one of the best platforms for building an SEO-friendly website. The latest version of WordPress will be installed and configured on the web server.

File Transfer Protocol (FTP) and Content Management System (CMS) access will also be generated during this phase. If required, additional users for the site's back-end will also be created. A website's back-end refers to scripts and applications that are run on the server. The back-end may also refer to the database that controls the user interface.

WordPress Theme Creation

We will build out structural mockups of your theme in wordpress and modify it to fit your needs. We are not capable of producing anything to fit a drawn up image, but for the most part we are able to produce a custom designed wordpress site to fit 98% of all custom requests.

Structural Mockups of Website

The structural mockups are basically the blueprint to your website. Each website has a layout and it is best to finalize the structural layout of the website before we enter into design. Therefore the team will provide structural mockups of the website and communicate with you until the structural layout of the website is approved and finalized. This is the larger portion of what make "Custom Wordpress Design" custom, because we are creating the structure to fit your needs, as opposed to choosing a theme to build off of that has a pre existing structure.

Free Image Sourcing

Relevant images that we scoured for across the Web will be strategically inserted within the website. Each image will be hand-picked to complement the blog article, adding value to the website's design and keeping the visitors engaged.

Please note that due to copyright restrictions, we are limited to choosing images from the free Public Domain Libraries which have an extremely limited selection. If we cannot find appropriate images, you may have to resort to procuring the images yourself.

Custom Designed Banners

A banner is the graphic image used to promote a website's main product line or service. It is usually located on the most conspicuous areas of the site.

A custom banner incorporating the company's selected products and/or services will be furnished. Banners will be designed to be striking, stylish, and compliant to the company's theme or motif.
